## Healing Collar Selection Guidelines

### Selecting A Healing Collar:

- Determine the size of the implant platform
- Select the emergence profile that best suits the site being restored. The profile should match the transfer and abutment to be used
- Select the cuff height so that the top of the component protrudes slightly above the surrounding tissue. The options are 3.0 mm, 5.0 mm or 7.0 mm

- HC3/TEHA3 = 3.5 mmD (Implant Platform) Healing Collar
- HC4/TEHA4 = 4.5 mmD (Implant Platform) Healing Collar
- HC5/TEHA5 = 5.7 mmD (Implant Platform) Healing Collar

### Example:

- HC343 = 3.5 mmD (Implant Platform) Healing Collar, 4.5 mmD Emergence Profile, 3.0 mm Cuff Height (second digit equals profile, third digit equals height)
- TEHA3383 = 3.5 mmD (Implant Platform) Healing Collar, 3.8 mmD Emergence Profile, 3.0 mm Cuff Height (middle two digits equals profile, last digit equals height)

## Components For Impression Transfers

### Multi-Purpose Fixture Mount/Transfer

Tapered Screw-Vent and Trabecular Metal Implants are packaged with a Fixture Mount/Transfer that serves multiple functions:

#### Implant Placement

The Fixture Mount is used as a means to deliver the implant to the surgical site and provides convenient color-coded identification that matches the implant analogs.

	Green	3.5 mmD Platform
	Purple	4.5 mmD Platform
	Yellow	5.7 mmD Platform

#### Implant-Level Transfer

The Fixture Mount then functions as a transfer that is conveniently pre-attached to the implant. Surgeons can take an immediate index or impression to complete the transfer, or restoring doctors can use it after the healing period.

#### Preparable Temporary Abutment

The Fixture Mount may also be prepared to function as a temporary abutment while the final restoration is being fabricated. Note: The Fixture Mount is not indicated as a final abutment as it does not achieve the friction-fit connection with the implant.

### Fixture Mount/Transfers

Includes a Retaining Screw (URS2). Can be used as a Preparable Temporary Abutment.
